Vue.js

Hands on workshop

By Vijay Shivakumar

Welcome

Welcome to the workshop

Please make sure that your phones are in silent mode
There will be breaks to keep up with your personal / official work

Dedicate time for practice and stay focused on the workshop

This is a hands on workshop be ready to code along

Lab files will be shared at the end of workshop
this hands-on-workshop do not provide any study material

Vue.js

About Me

Vijay Shivakumar
Designer | Developer | Trainer

Certified Expert

Training & Consultation of
Contemporary Web Technologies and Adobe products from past 20+ years

Vue.js Pre requisites

Technical Skill : HTML5, CSS3, JavaScript 1.8.5 and ES6

Hardware and software:

- IDE : visual studio code
- Browsers : chrome latest and install Vue devtools
- Platform : nodejs latest
- Database : mongodb or a cloud account to access mongodb
- Version Control : git
- Network : internet access to download from git and npmjs.org

Vue.js Objectives

Understand and explore ES6 / ES7

Write Programs using Vue 3 using Options api

Write Programs using Vue 3 using Composition api

Understand

- binding contents and binding attributes
- components directives
- event handling
- conditional rendering
- dynamic classes
- form validations
- routing
- computed properties and more

Vue Advantages

Easy to get started

- Leverage with HTML5, CSS3, ES and NodeJs knowledge
- Start with easy steps and scale as your application grows
- CLI allows easy management
- Vue Devtools will give a deeper understanding of your application
- Components based architecture makes it easy to maintain & scale
- Use in existing project and make progressive enhancements
- Just about 20KB runtime file
- Updates only the DOM that needs an update
- Best of Angular, React along with other libraries and frameworks

Component contents

Inline

```
<template></template>
<script></script>
<style></style>
```

External

```
<template src="./template.html"></template>
<style src="./style.css"></style>
<script src="./script.js"></script>
```

Expressions in Vue

{{ }} Double curly braces can evaluate / interpolate data and expressions
each {{}} can run a single expression
expressions can only access the properties declared in data object
there can be more than one expression on a single tag

What's allowed

Math and Number expressions
String methods
Date methods
Logical expressions
Conditional expression

What's not allowed

Declaring and assigning a property
Using JavaScript key words
Conditional statements
Creating new instances
Declaring functions

Template tag

<template> </template>

Can have

- html tags
- interpolation
- directives
- custom components
- special components
- special attributes

Vue.js Script tag

<script> </script>
apart from imports
we must export a default object that can have the following

name is a property [string]
data [method] that returns an object
methods[object]
lifecycle events[methods]
mixins[array]
props [object]
components [object]
computed [object]
watch [object]
provide [object]

Vue.js Style tag

<style> </style>

Can have following attributes

scoped : for a component or for its child components with the matching selector

src : to attach external css file

module : to use as css modules that can be used with $style name

lang : to declare a css preprocessor type eg “scss” “sass”

Thank you
